iQafé

Deep-tech teams, job-ready in weeks.

Measured, AI-personalised upskilling in quantum, AI and EV technology — for enterprises and the graduates they hire.

Dr. Taha Selim · Founder & CEO

Investor presentation · [Month 2026]

Assess.

Baseline every learner against the role

Learn.

A personal path of five-minute expert modules

Prove.

Measured time-to-competency, reported to the client

THE PROBLEM

Deep-tech deadlines are arriving faster than teams can be trained

2030

NIST deprecates RSA and ECC after 2030 — banks and telecoms must move to post-quantum cryptography

63%

of employers call skill gaps the biggest barrier to transformation

39%

of workers' core skills are expected to change by 2030

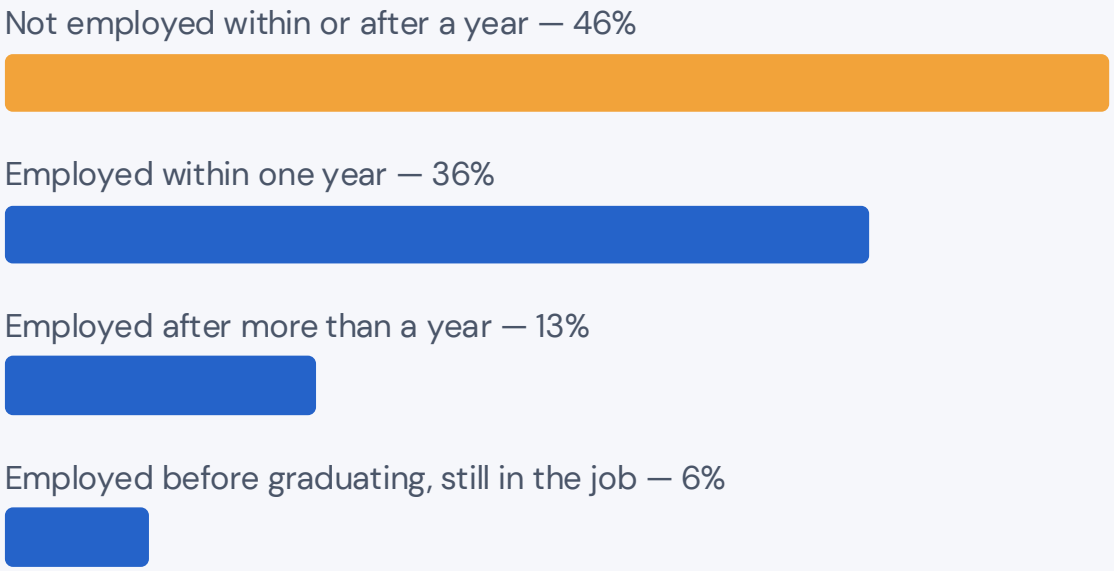

A team lead today has two options: **generic online courses** that take months and prove nothing, or **bespoke consultants** who are deep but slow and expensive.

Sources: NIST IR 8547 (final, Oct 2026); World Economic Forum, Future of Jobs Report 2025

THE TALENT PIPELINE

The graduates exist — they aren’t trained for the roles on offer

Saudi software & application graduates — employment status (2023)

Train-to-hire turns this pool into a pipeline.

Each track is co-designed with an employer that commits to interview graduates, and paid for by that employer or by government upskilling funds.

Source: National Labor Observatory (KSA), graduate employment data published 2023

THE SOLUTION

iQafé runs 4–6 week deep-tech programmes for teams. AI personalises every learner’s path — and we prove the result.

Measured time-to-competency

Tracks built by researchers

Fixed price per cohort

HOW A PROGRAMME RUNS

From a skills deadline to a proven team in four steps

01

Assess

The client defines the target role; every learner takes a baseline test against it.

02

Assemble

AI builds each learner's path from expert micro-modules, skipping what they already know.

03

Learn & adapt

Questions after every video, weighted towards each learner's weak points.

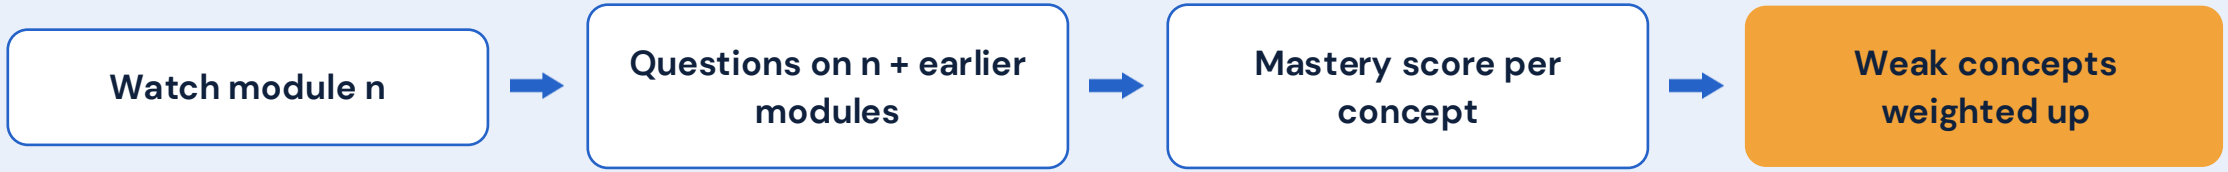

04

Prove

A final assessment and a team report: who reached the target, and how fast.

WHY WE CAN PROMISE SPEED

The engine makes progress measurable — and improves with every cohort

↻ The loop repeats after every module

Faster

Time goes only to concepts a learner hasn't mastered — nothing they already know.

Measurable

Concept-level scores give the client a live view of team progress.

Compounding

Each cohort shows where people in a given role get stuck — data no generic platform has.

CONTENT

Three launch tracks, built from material we already teach

Post-quantum security readiness

For banks and telecoms facing the 2030 deadline

Quantum AI

For R&D and data-science teams exploring quantum advantage

AI for EV batteries & materials

For engineers in EV, energy and chemicals

Next, on demand: Quantum sensing | Vibe coding | Programming & computing | Chemistry simulation

Existing lectures, workshops and course material are cut by AI into **~5-minute modules** and reviewed by experts. New modules are built only when a paying customer needs them.

MARKET

A huge training budget — we start in the fast-growing Gulf

GLOBAL CORPORATE TRAINING

$384B

in 2025, projected to reach **$587B by 2030** (8.7% a year)

GCC CORPORATE TRAINING

$12.9B

in 2025, projected to reach **$22.2B by 2031** (9.8% a year)

OUR WEDGE

≈$5.2B

Technical and digital skills training in the GCC — 40% of the market

In the GCC, buyers increasingly demand proof that training improves readiness — exactly what iQafé measures.

Sources: 360iResearch (global); Mordor Intelligence (GCC, 2025 share of technical training). Estimates vary by source.

FIRST MARKET: SAUDI ARABIA

The kingdom pays to train its talent — and to get it hired

$3.8B

Saudi corporate training market in 2025, growing about 6.7% a year

$2.2B

spent by HRDF on training, empowerment and guidance in 2025 (SAR 8.3B)

2M+

Saudi citizens benefited from HRDF programmes in 2025

562K

Saudis placed in private-sector jobs with HRDF support in 2025, up 29%

Why it matters for iQafé: HRDF already funds training linked to employment through partnerships with employers — over SAR 681M in new strategic-sector partnerships in December 2025 alone. That is the model for our train-to-hire tracks.

Sources: IMARC Group via RSM (market); Human Resources Development Fund (HRDF / Hadaf) 2025 announcements

BUSINESS MODEL

Paid cohorts first, platform licences later

Offer	Who pays	Price
Team programme · now	Enterprise R&D, IT and L&D budgets	Fixed fee per cohort, [€__ per team of __]
Train-to-hire · now	Hiring employer or government upskilling fund	[€__] per graduate trained
Platform licence · after 10 customers	Repeat customers running their own cohorts	[€__] per seat per year

Outcome guarantee

Team reaches the target in [__] weeks, or extra support is free.

Tracks are reused

One track serves every customer in a sector, so margins rise with each sale.

TRACTION

Companies already ask for this — we deliver it by hand today

PILOT TARGETS · NEXT 6 MONTHS

3 of 10

past workshop clients converted into paid pilots

30%+ faster

to pass the assessment than the client's usual training

80%+

of learners complete the programme

DISTRIBUTION & CREDIBILITY

Dec 2024	Monthly **Quantum AI series** with the Bibliotheca Alexandrina — ongoing
Sep 2025	Sponsor of **Egypt's first national quantum hackathon**, with CERN's OQI and IBM
2026	Co-host of a **Quantum Industry Summit** (May) and the **second Alexandria hackathon** (Sep)
Listed	Lecture series in **CERN OQI's** educational repository

Sources: Bibliotheca Alexandrina news; CERN OQI Educational Repository

COMPETITION

Courses are cheap but generic; consultants are deep but slow and costly

What the client gets	iQafé	Course platforms	Consultancy workshops	AI chatbots
Personal path per learner	Yes, by AI	Fixed courses	One class for all	Self-directed
Practice weighted to weak points	Yes	Partial	No	Only if asked
Measured team outcome	Yes, guaranteed	Completion stats	Rarely	No
Deep-tech depth from researchers	Core focus	Some	Varies	Unverified
Cost per team	[€__]	Low	High	Near zero

Course platforms: e.g. Coursera, Udemy, LinkedIn Learning. From public product descriptions.

ROADMAP

Prove it by hand, then build the platform around what works

We are here · next 6 months

Paid pilots

3 enterprise pilots delivered by hand from existing material. Measure time-to-competency against a control group.

2027

10 paying customers

Founding engineer turns the manual steps into the platform. First train-to-hire track with an employer.

2028 onward

Scale

Self-serve platform licences, more sectors and tracks, and our own learning-specific models.

FOUNDER

A deep-tech educator who already sells this — by hand

Dr. Taha Selim

Founder & CEO, iQafé

Full-time on iQafé from [date]

- Already delivers paid Quantum AI workshops for companies and banks
- Lecturer-researcher in Applied Quantum Computing, Amsterdam UAS; co-developed the joint Master's in Applied Quantum Technology
- Co-founder and GM of MolKet SAS, Paris — member of QuIC (EU) and QED-C (US)
- PhD, Radboud · MSc, Burgundy · BSc, American University in Cairo
- Built iQafé's partnerships with the Bibliotheca Alexandrina and CERN OQI-backed events

First hire: founding engineer / CTO

[Name or profile] — builds the platform around the manual pilot process

THE ASK

Raising [€__] to reach 10 enterprise customers and productise the engine

Use of funds	
Founding engineer and platform	[__%]
3–5 new expert tracks	[__%]
Enterprise sales and pilots	[__%]
Operations	[__%]

Milestones in [18] months	
Paying enterprise customers	10
Proven gain in time-to-competency	[__%]
Train-to-hire employer partners	[__]
Revenue	[€__]

iQafé

Deep-tech teams, job-ready in weeks.
